

Securities lending product roadmap

User experience is a big focus, where we want to address common pain-points (like manual booking of transactions, recall management, month end fee and interest reconciliation) as well as enhancements to the software. We will continue to collaborate with users and make regular improvements, particularly in response to user feedback.

Exciting new launches are on the way, plus enhancements to securities lending that improve manual booking of loans and help to make a seamless transition from legacy to future securities lending platforms.

What are we working on?

Enhancing
Indication of Availability to reflect traded market volumes.

Publishing suggested loans for T+3 settlement cycle into **Loan Suggestion** widget to enable automated locates.

Allowing borrowers to locate suggested loans via **Request for Quote** widget.

Migration of perFIX screens into iLoan.

Creation of daily Fee and Interest reconciliation in iLoan.

Flexible. Scalable. Customisable. iLoan securities lending software. iress.com/iloan
