

Pro

Real-time data and powerful analysis to support better decisions

Introduction

Accurate, timely market data and robust analysis tools are essential for traders, dealers and analysts making high-value decisions in fast-moving markets. Fragmented systems and delayed information can reduce visibility, increase risk and undermine confidence.

Iress Pro addresses this challenge by bringing real-time data, advanced analysis and decision support together in a flexible, scalable and highly configurable platform. Integrated with Iress trading and portfolio management systems, it supports informed decision-making across global markets.

What is it and what does it do?

Iress Pro is a real-time market data and analysis platform designed for institutional and private client dealing rooms, fund managers, research teams, corporates and private traders. It provides:

Advanced market analysis and charting tools.

Local and global news, company reports and detailed security information.

Company analytics including financials, profiles, shareholding and estimates data.

Seamless integration with Iress trading platforms and portfolio management systems.

Real-time and historical market data delivered via high-speed dedicated connections or the internet.

Information is presented in a clear, structured format to support fast, informed decision-making across multiple asset classes.

Features and benefits

Market data

Provides a complete, live view of markets in one place.

- Real-time quotes, full market depth, regulatory announcements and company news
- Macroeconomic, price and trade data within a single platform

Market analysis

Supports deeper insight into market movements and trading behaviour.

- Market summaries, alerts and heatmaps
- Historical and real-time charting
- Broker share activity and market replay tools

Security analytics

Strengthens company research and valuation analysis.

- Detailed company profiles, financial and shareholding information
- Annual and interim financial statements with up to 10 years of history
- Consensus estimates with three-year forecasts, actuals and historical data
- Top shareholder rankings with historical comparisons

Excel interface

Extends analysis and reporting beyond the platform.

- Preformatted add-ins for price and analytics data
- Watchlists displayed and managed in Excel
- Download of historical time series data
- Financial and estimates templates for company comparison

Leading-edge development

Supports continuous improvement without disruption.

- New functionality delivered using HTML5
- Features released independently of version upgrades

Market data and feature flexibility

Keeps costs aligned to usage.

- Access only the data and features you need
- Add or remove access as business requirements change
