

Fact sheet

Iress FIX Hub

Connect once, trade everywhere

To trade smarter in today's market, you need the right information, tools and support.

More than 12,000+ institutional, retail and online traders around the world use Iress' trading and market data software to connect across multiple markets, monitor and manage risk, access end-to-end multi-asset trading support and deliver better performance.

Iress FIX Hub (IFH) is a modern, **cloud-native connectivity platform that's open and vendor-neutral**. Giving you faster access to trading partners worldwide without the cost and complexity of legacy infrastructure.

Go live in a single day. Connect once to your nearest hub and instantly reach a global network of counterparties. With **five regional hubs** and direct global pathways, IFH delivers built-in global reach and the fastest routes to liquidity across asset classes.

Speed and flexibility come standard. IFH's **dynamic message routing** ensures the fastest

routes to your trading partners across multiple asset classes. While **real-time mapping and flexible trade rules** let you customize every connection on demand. The result? Faster time-to-market, lower risk, and greater flexibility.

Stay in control. With **live monitoring, diagnostics, and full session visibility**, you see exactly what's happening across your FIX infrastructure. Built-in audit trails and configurable risk controls strengthen compliance and increase trading confidence.

Always on. IFH is designed for **uninterrupted availability**, with cloud-native resilience, automated failover, and enterprise-grade security. All backed by **24/6.5 global support**.

Simply 'Opt in' to your 'local' hub, and IFH takes care of the rest.

Made for modern markets

Open and neutral

Connect with anyone, anywhere, without lock-in
