

Media Release 14 July 2025

Iress boosts trading data capabilities with cloud-native 'Data Insights' platform

Iress today announced that it has launched 'Iress Data Insights' - a cloud-native data platform that streamlines how its trading and market data clients can access, manage, and analyse data.

Iress Data Insights enables its trading and market data clients to leverage their raw data, including audit and transaction data, and transform it into intelligence; helping clients enhance visibility, strengthen risk management, improve productivity and uncover deeper insights across the trade lifecycle.

The product is available initially for Iress' Australian sell-side trading clients and accessible via MyIress, Iress' interoperable web platform. The first module available on the platform is the Regulatory Reporting module, which enables compliance, risk and operations teams to review, analyse and extract regulatory data, so they can detect potential issues early and reduce compliance risk.

Iress' Executive General Manager - Product & Development, Michael Barbera, said: "There's a growing demand for fast, readily consumable data to support trading performance goals, meet regulatory requirements, and improve risk management. Historically, critical trading data has been trapped in silos and legacy systems that require manual data manipulation, which can be resource-intensive and prone to errors. Iress Data Insights equips our trading clients with intelligent insights and self-serve tools, powered by high-quality datasets, to speed up compliance workflows and drive more informed decision-making.

"By providing self-serve access to comprehensive regulatory data, Iress Data Insights empowers clients to spend less time on manual data manipulation and more time focusing on higher-value work. The platform is built on secure, scalable, cloud-native infrastructure within MyIress, which means that clients will be able to access their trading solutions, connectivity and data products all from one platform, without having to switch screens.

"Future enhancements will include business intelligence reporting to uncover opportunities to optimise execution and workflows, secure and scalable data sharing through open integration standards, and AI-driven insights to support more proactive, data-led decision-making. We're also looking to bring in additional data sources, such as Iress FIX Hub, to make Iress Data Insights accessible to our international clients."
