

Iress Data Insights

Regulatory reporting with
clarity and control.

Introduction

Regulatory reporting depends on fast access to accurate, complete and consistent trading transaction and audit data. For many firms, however, this data is fragmented across desks, systems and venues. This creates delays, manual effort, increased risk and difficulty identifying issues early.

Iress Data Insights Regulatory Reporting addresses this challenge by providing self-serve, centralised access to normalised audit and transaction data. Built on secure, scalable, cloud-native infrastructure, it enables compliance, risk and operations teams to search, filter, extract and investigate information with confidence. Integrated alerting supports proactive issue identification without switching systems or relying on manual processes.

What is it and what does it do?

Iress Data Insights Regulatory Reporting is a cloud-native, self-serve data access platform that provides reliable, unified access to trading data directly within the Iress environment.

It enables teams to:

Access audit and transaction data instantly through MyIress, with no installation required.

Search, filter, visualise and extract normalised regulatory data on demand.

Detect potential issues early using centralised, unified data.

Investigate issues without switching systems or relying on external tools.

Use built-in capabilities including business intelligence, data sharing, alerting and customised dashboards to improve workflow efficiency and support proactive compliance.

This removes data fragmentation and provides teams with greater transparency and control across the regulatory reporting lifecycle.

Features and benefits

Connected, centralised data

Ensures data integrity, accuracy and complete visibility.

- Unifies fragmented audit and transaction data across desks, systems and venues into a single interface within the Iress ecosystem.

Self-serve reporting

Enables teams to analyse information faster and act with confidence.

- On-demand access to search, filter, visualise and explore regulatory data.
- Reduces manual manipulation and reporting delays.

Proactive compliance monitoring

Supports early issue detection and reduces compliance risk.

- Rule-based alerts, exception reporting and investigation tools.
- Fully embedded within the Iress ecosystem, allowing teams to trace issues back to source without screen switching.
- Advanced AI-based alerting planned for future release.

Built-in data protection

Protects sensitive data and supports regulatory security requirements.

- Multi-factor authentication, single sign-on, encryption in transit and at rest, and role-based access controls.

Scalable infrastructure

Supports growth and maintains performance as regulatory requirements evolve.

- Cloud-native architecture supporting rapid deployment, continuous updates, granular access controls and unified data access.

**Strengthen
regulatory reporting
with confidence**
