Globally integrated: By 50+ global trading application/fintech partners

Stay in control and achieve compliance with our Vendor of Record (VOR) status and a dedicated experienced team

Hybrid delivery capabilities with services delivered over cross-connects and to major cloud providers

Market data and APIs

QuantFEED is our award-winning API carefully crafted to handle large volumes of data while focusing on high performance delivery so you never miss an opportunity to trade when and where you need to.

- **Single FeedOS client API** available in three languages; C++, Java and .NET C#.
- **Power up your front office market data applications** with 240 normalised real-time market data feeds from over 80 sources delivered through a single API that you can trust to evaluate and predict market movements.
- **Say goodbye to complexities** as our high-performance feeds that easily integrate with global 3rd party OEMS solutions.
- **Optimise market access and streamline operations** with our comprehensive API and infrastructure solutions that streamline market access, handling custom software development and maintenance.
- **Single view of market liquidity** with our European and National BBO data solutions.

ConsolidatedFEED is a simple, cost-effective global market data feed conflated for bandwidth safe consumption for a wide range of trading applications.

Data products

Analytics, reference data, end-of-day pricing data (EoD) and historical market data to support your research, middle and back office operations with the data you need, when you need it.

- **Analytics to improve order execution performance, evidence based execution and benchmark market share.** Choose from four daily liquidity analytics files covering exchange venue data delivered on a T+1 basis and powered by our award-winning QuantFEED technology.
- **Reference data:** Identify instruments, exchange segments, and trading phases with our comprehensive reference data files.
- **Comprehensive global symbology mapping:** Access a daily maintained list of instrument symbols and their linked global identifiers, including FIGI, ISIN, CUSIP, and BMLL.
- **End-of-Day pricing data:** Easily access accurate closing prices delivered immediately upon the expiration of the exchange's embargo period.
- **Historical data:** 15+ years of tick-by-tick normalized historical data (L1, MBL and MBO) including 3 timestamps, allowing for high quality research and backtesting. Backfill and subscription delivery.

Infrastructure and Connectivity

Global infrastructure designed and managed in-house covering 19 global Points-of-Presence across a resilient network mesh (platform). Giving you the choice of pick-up location based on your global operations.

- **Order routing:** Seamlessly send your orders to exchanges, brokers and execution venues via resilient connectivity.
- **Co-Location, Proximity hosting and global connectivity** to the financial ecosystem (brokers, execution, liquidity pools, venues, and technology providers) for an effortless integration.
- **Hybrid delivery capabilities:** services delivered over cross-connects and to major cloud providers.
